recent sample. No sample required for 2021.

Trihalomethanes (TTHMs)

Some people who drink water containing trihalomethanes in excess of the MCL over many years may experience liver, kidneys, or central nervous systems, and may have an increased risk of getting cancer.

We are required to provide this information as an indicator of whether you are in violation of the requirements of the SDWA.

LEAD INFORMATION

If present, lead in drinking water may be responsible for lead in your water. Lead in water can leach from pipes and fixtures. Lead in water can be reduced by flushing your water for 30 seconds to 2 minutes before drinking. For more information, visit www.doh.wa.gov. Drinking Water offers lead testing information.

VIOLATION INFORMATION

During the first quarter of 2022, the maximum lead level is .080 mg/l.

UNREGULATED CONTAMINANTS

Unregulated contaminants are those for which EPA has not established a maximum contaminant level. Contaminant monitoring is to assist EPA in determining the occurrence of contaminants and whether future regulations are warranted.

All sources of drinking water are subject to potential contamination. Drinking water substances can be microbes, inorganic or organic chemicals and may reasonably be expected to contain at least small amounts of these substances. These substances do not necessarily indicate that the water poses a health risk. More information is available by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4799.

Some people may be more vulnerable to contaminants in drinking water than others. People with kidney disease, pregnant women, infants, and the elderly are among the most vulnerable. People with cancer, especially bladder cancer, and people with immune system disorders, some elderly, and infants can be particularly at risk of serious effects from drinking water. EPA/CDC has information on drinking water and health. EPA/CDC also has information on Cryptosporidium and other microbiological contaminants are available at www.epa.gov/safewater.

The Coahoma Community College works around the clock to provide clean water to our community. We protect our water sources, which are the heart of our community, our water.
